

# Supercharging developer productivity

GitHub Copilot, Codespaces, GitHub  
Advanced Security and Search

Andrew Weiss | Field CTO, Public Sector

October 27, 2023

# DevOps Today

## Lost Productivity

**37% of employee time is wasted due to poor collaboration.**

23+ min switching between tools per person.

## Security Risks

**Flaws in applications are the #1 attack vector.**

1 security team member for every 100 developers.

## Missed Opportunities

**Companies are not equipped to fully realize the power of AI.**

Only 10% of companies have figured out how to use AI in their organizations.

46% of code  
is written with the  
help of Copilot

More than  
**1M developers**

# Collaboration

Seamlessly connecting teams to build their best together.

Faster onboarding

**Reduce developer onboarding training time by 80%, resulting in savings of USD 3.2 million**

Employee satisfaction

**Ready-made solutions built into the platform — so you can focus on creativity**

No silos through innersource

**Bring the best of open source to your company through innersource practices**

# Productivity

Enabling every developer to focus all their creativity on the big picture.

## Improve time to market

- Faster deployment through core platform services
- Ready-made solutions built into the platform

## Increased revenue growth

- Prioritize reuse over invention
- Reduce admin tasks with automation

## Increased customer satisfaction

Default to transparent work to work more efficiently and productively, together

# Security

Native, first party security by design to fix issues in minutes, not months.

## Reduce risks

- Secure your development environments
- Reduce time spent on remediation, resulting in savings of USD 5.2 million

## Seamless management

- Admin controls and management
- Embed security in your developer workflow

## Security policy creation and enforcement

- Prevent code vulnerabilities in production
- Native Application Security Capabilities

# Scale

Scale your business  
with GitHub

Leverage one platform

**Use one platform to scale  
your company's software  
development**

Reduce maintenance

**Built-in compliance  
controls, governance, and  
administrative tools**

Reliability

**Jumpstart with a  
platform developers  
know and love**

# GitHub Platform

GitHub Enterprise Platform

# Codespaces

# Codespaces

A cloud dev environment that lets you code from anywhere

## ✓ Code without compromise

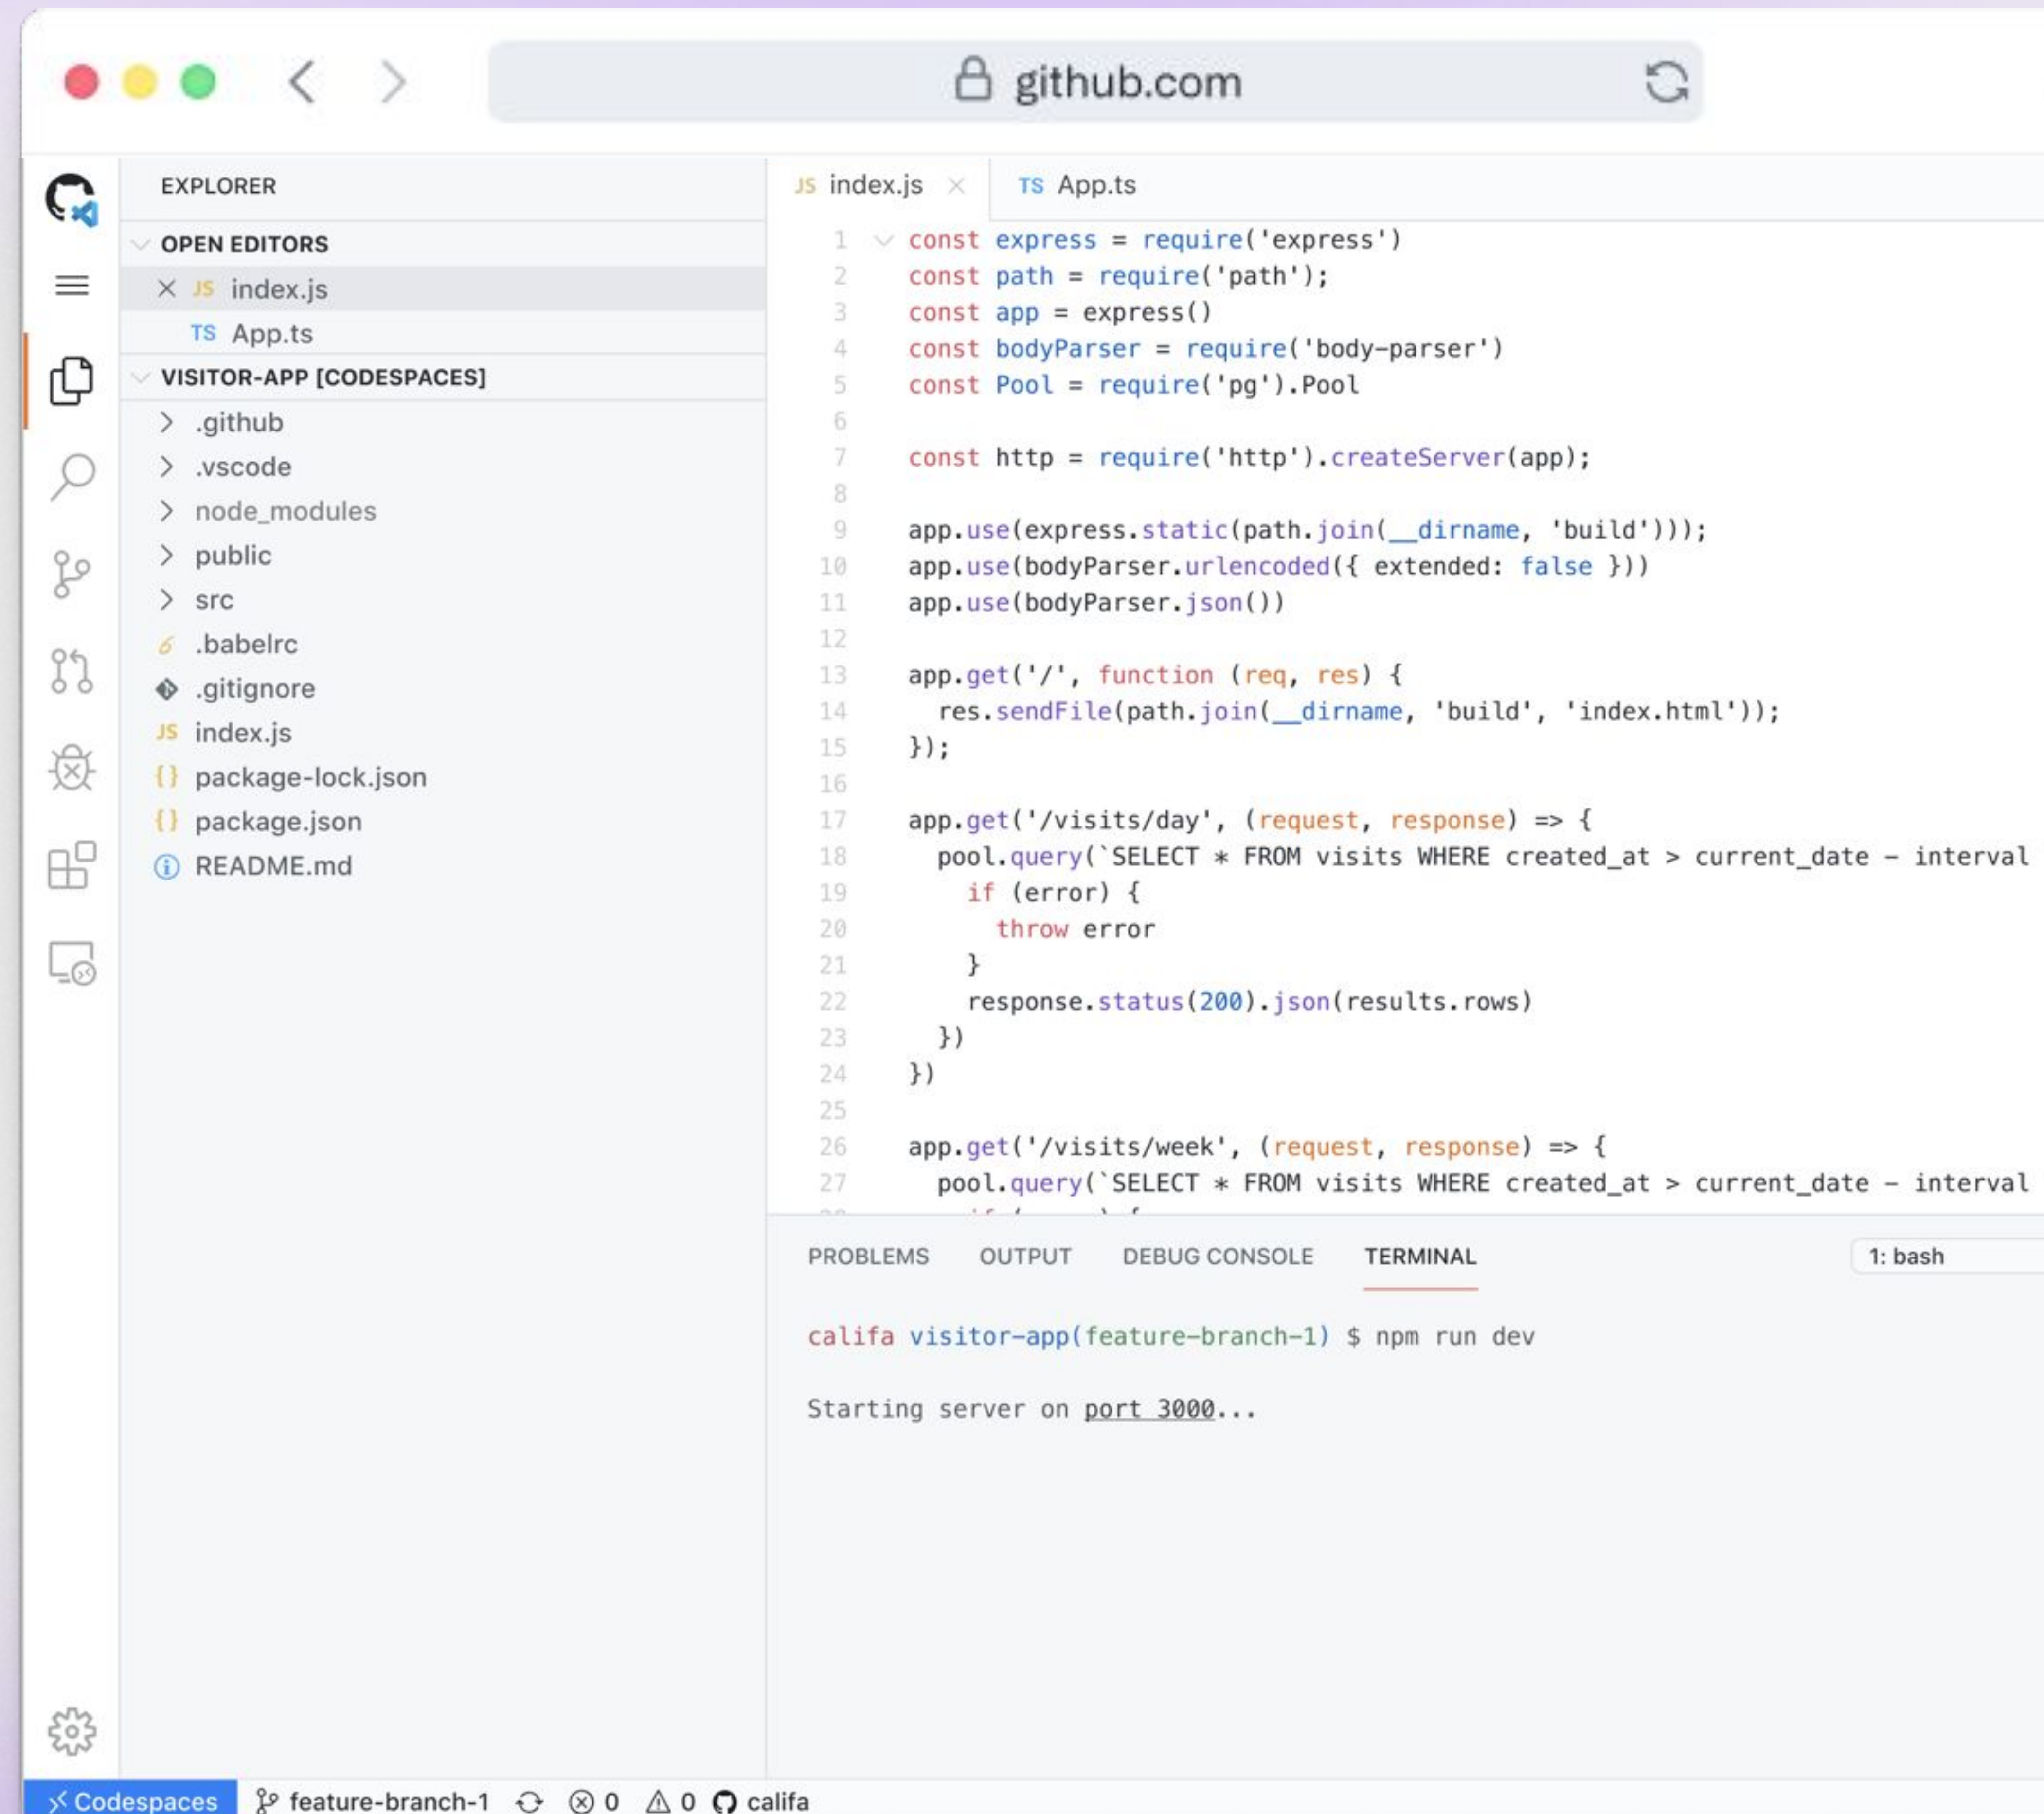

Code, build, test, debug, and deploy with a complete development environment in your browser, running on Azure.

## ✓ Simplify your workflow

Automatically set up dependencies and SSH keys. Go from code to commit faster on any project.

## ✓ Extend and customize

Configure your editor with dotfiles and VS Code extensions to create a consistent environment in every Codespace.

# Why Codespaces?

**Repo and User  
level configuration  
for ease and  
efficiency**

**Immediate,  
effortless  
onboarding  
to any project**

**Work from  
anywhere,  
on any device**

**Consistent,  
ephemeral  
development  
environments**

GitHub Enterprise Platform

# Copilot

# AI is the next frontier in DevEx.

A McKinsey study found that equipping developers to be their most productive also significantly improves the developer experience, and developers using generative AI-based tools were more than twice as likely to report overall happiness, fulfillment, and a state of flow.

# Copilot

Your AI pair programmer.

Uses the context you've provided  
and synthesizes code to match.

✓ Convert comments to code

✓ Autofill for repetitive code

✓ Autosuggest tests

✓ Show alternatives

The screenshot shows a GitHub Security Advisory page for the repository `fresh-co/checkout`. The advisory is titled "Sensitive information exposure through logs" and is marked as "Pending". It was disclosed by `mayathepolarbear` just now. The advisory details a flaw in the package `fresh-co/checkout` (npm) affecting versions `>= 4.0`, with no patched versions available. The description states: "A flaw was found where global search results could include author information on some activities where a user may not otherwise have access to it." The impact section contains placeholder text: "Lorem ipsum dolor sit amet, quo modus pertinax expetendis ne. Ei agam possit est, pri te detraxit neglegentur, at mea brute tibique. Autem prompta denique in mel. Vim verterem repudiare an. Mutat maluisset ut pro, vel dolor pertinax et. Dicit labore detraxit no quo, cu per doctus eripuit liberavisse." The advisory also lists several "Unordered list item" entries. The page includes a sidebar with "Severity" (High), "CVE ID" (No known CVE—Request a CVE), "Weaknesses" (CWE-843, CWE-79), "Collaborators" (fresh-co/checkout owners, mayathepolarbear Author), and "Publishers" (fresh-co/checkout owners). At the bottom, there are buttons for "Collaborate on a patch in private" and "Start a temporary private fork", along with a thank you message for submitting the disclosure.

# Demo

# Dependabot

Automatically update vulnerable and out-of-date dependencies

## ✓ Automated pull requests for security & version updates

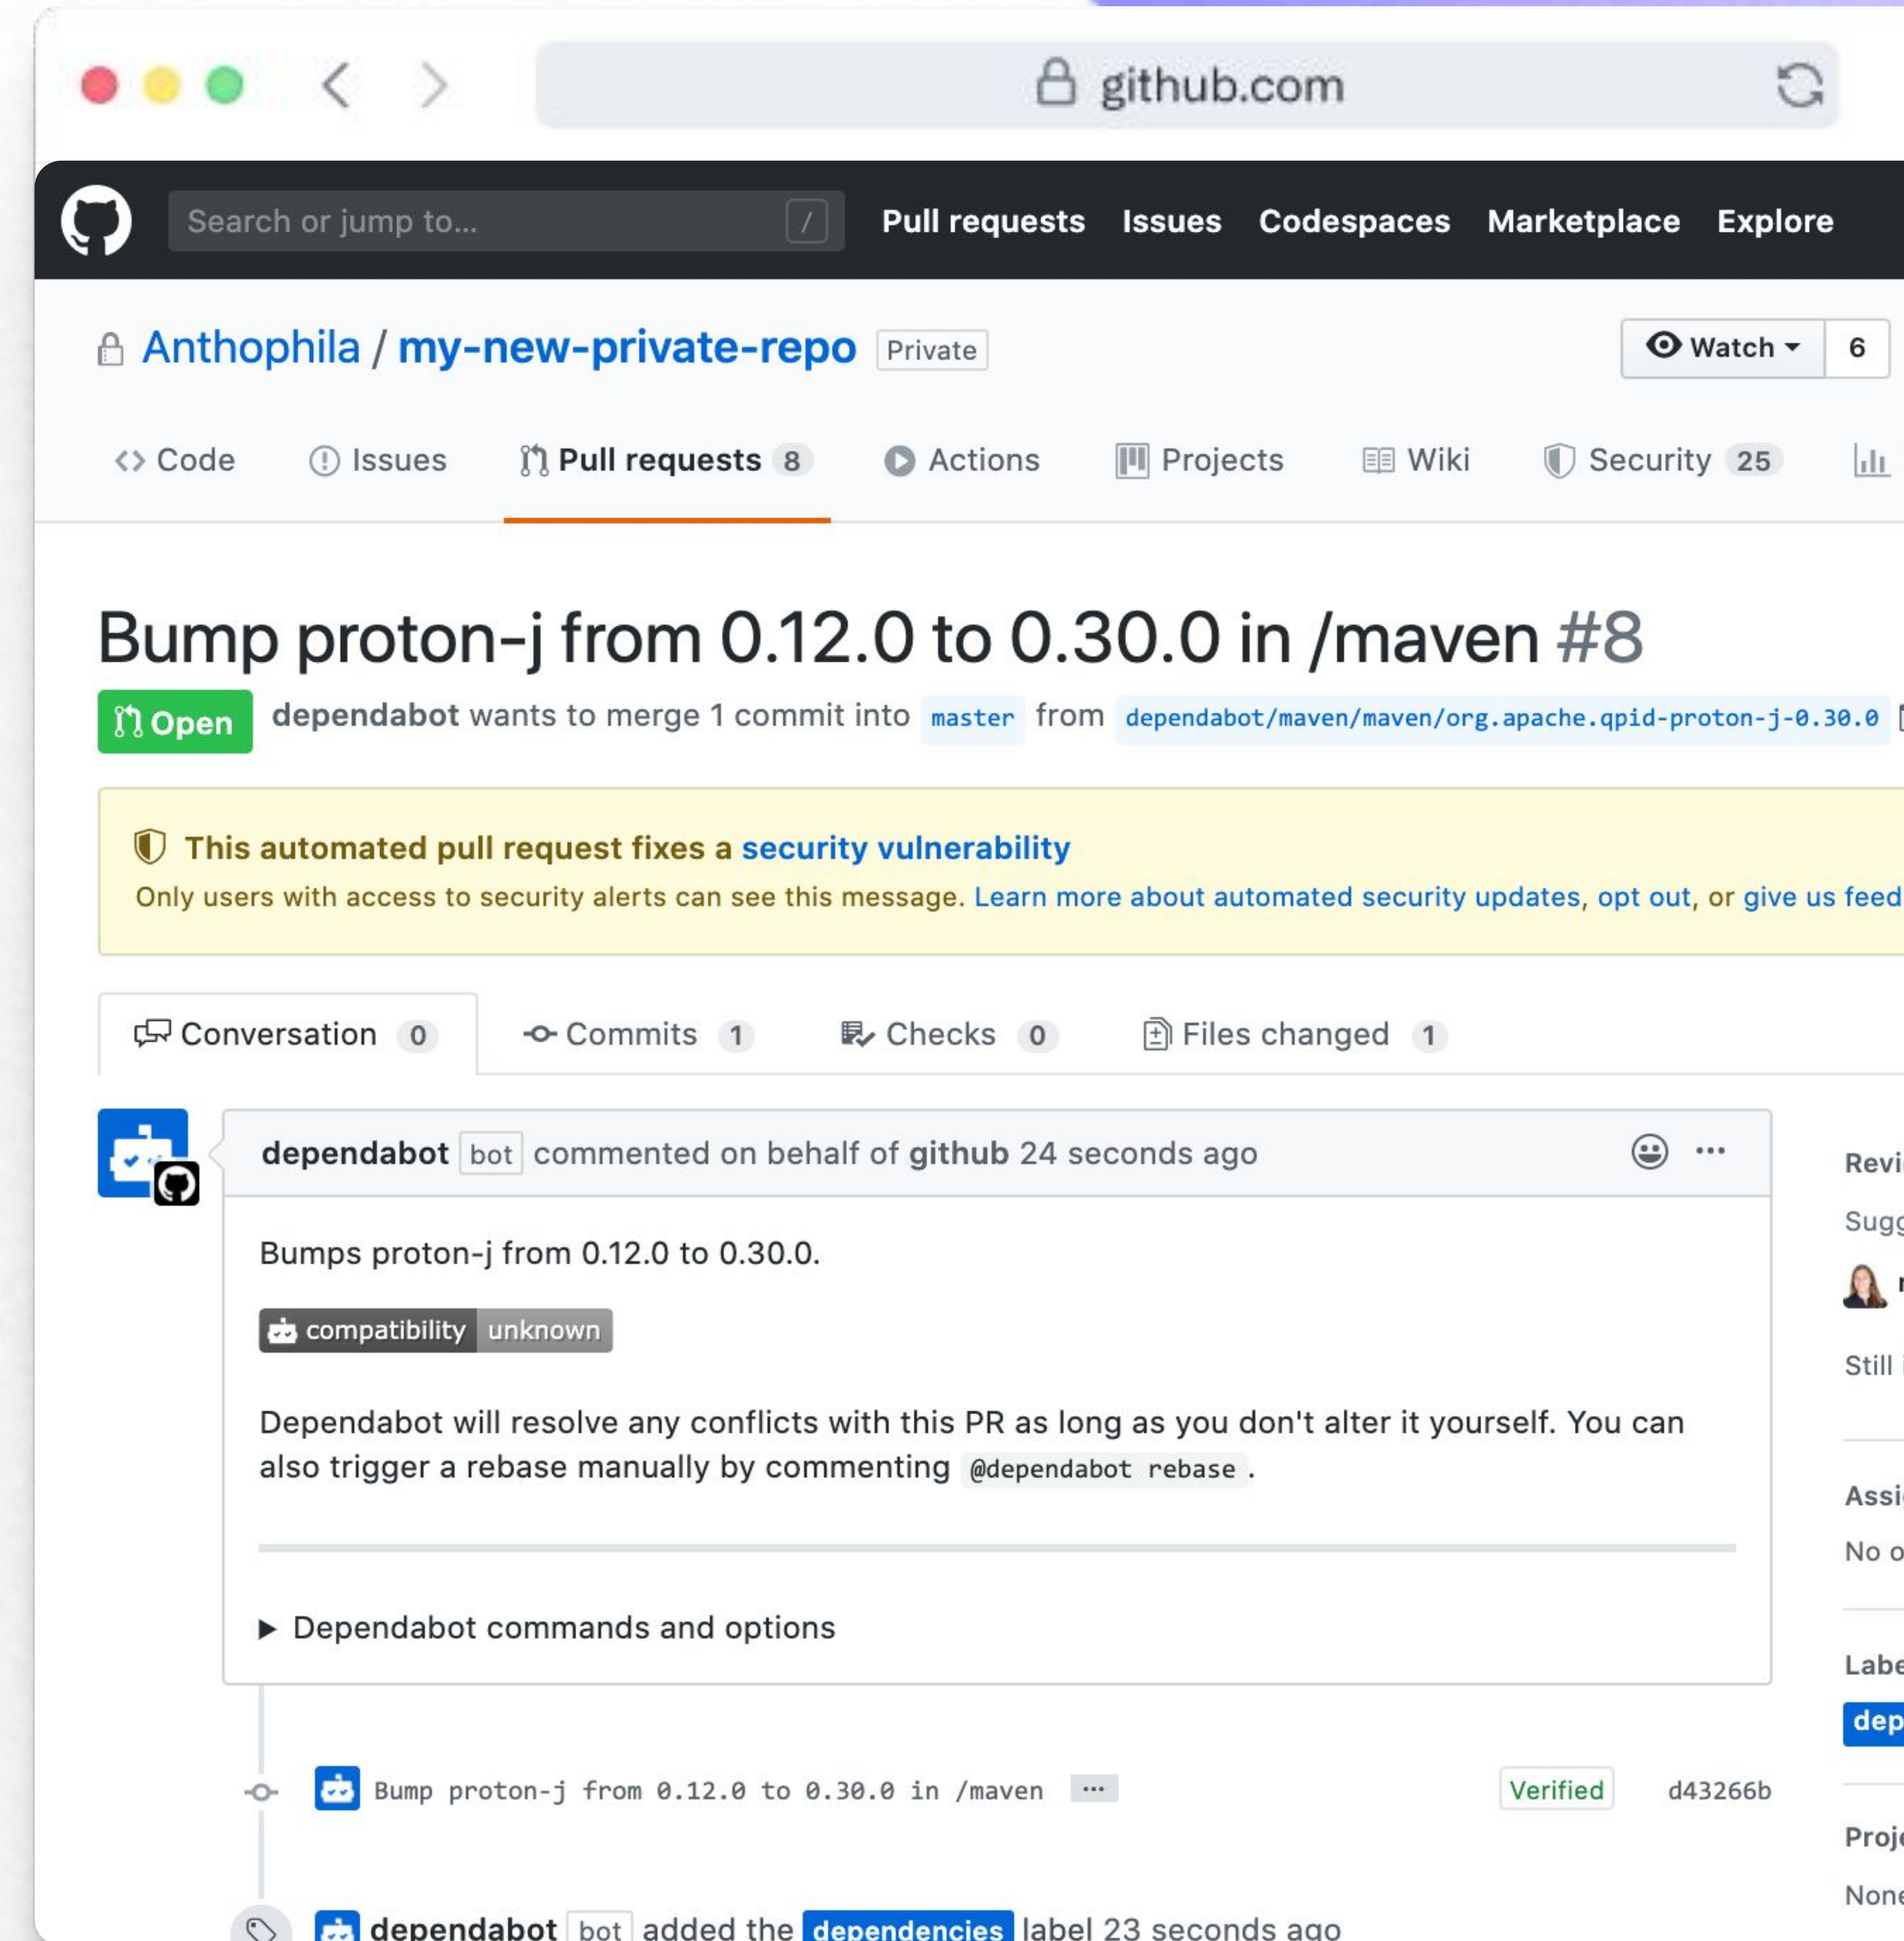

Keep your projects secure and up to date by monitoring them for vulnerable and out-of-date components. If a suggested update is found, we'll automatically open a pull request with suggested fixes.

## ✓ Integrated with developer workflow

Dependabot is integrated directly into the developer workflow for a frictionless experience and faster fixes.

## ✓ Rich vulnerability data

GitHub tracks vulnerabilities in packages from supported package managers using data from security researchers, maintainers, and the National Vulnerability Database— all discoverable in the GitHub Advisory Database.

# Code scanning

Find and fix vulnerabilities as you code

## Find and fix vulnerabilities fast

Find and fix vulnerabilities before they are merged into the code base with automated CodeQL scans.

## Community of top security experts

Your projects are powered by world-class security teams. Use queries created by the security community in your projects.

## Integrated with developer workflow

Integrate security results directly into the developer workflow for a frictionless experience and faster development

The screenshot displays the GitHub Code Scanning interface for a repository named 'dsp-testing / code-scanning-demo'. The 'Security' tab is active, showing a list of alerts on the left sidebar. The main area displays a specific alert titled 'Server-side URL redirect' with a 'Warning' severity. The alert is associated with the 'master' branch and a file named 'test.ts'. The code snippet shows a function 'sendRedirect' that sets the 'Location' header to a user-provided 'url' without validation. The alert message states: 'Untrusted URL redirection due to user-provided value.' Below the code, a table provides details about the alert:

Tool	Rule ID	Query
CodeQL	js/server-side-unvalidated-url-redirection	<a href="#">View source</a>

The description of the alert explains that directly incorporating user input into a URL redirect request without validation can facilitate phishing attacks. The alert also indicates it first appeared in commit 1a36781 on April 9.

# Secret scanning

Find and manage hard-coded secrets

## Identifies secrets as early as possible

Finds secrets (including Azure secrets) the moment they are pushed to GitHub and immediately notifies developers when they are found.

## Community of secret scanning partners

For every commit made to your repository and its full git history, we'll look for secret formats from secret scanning partners.

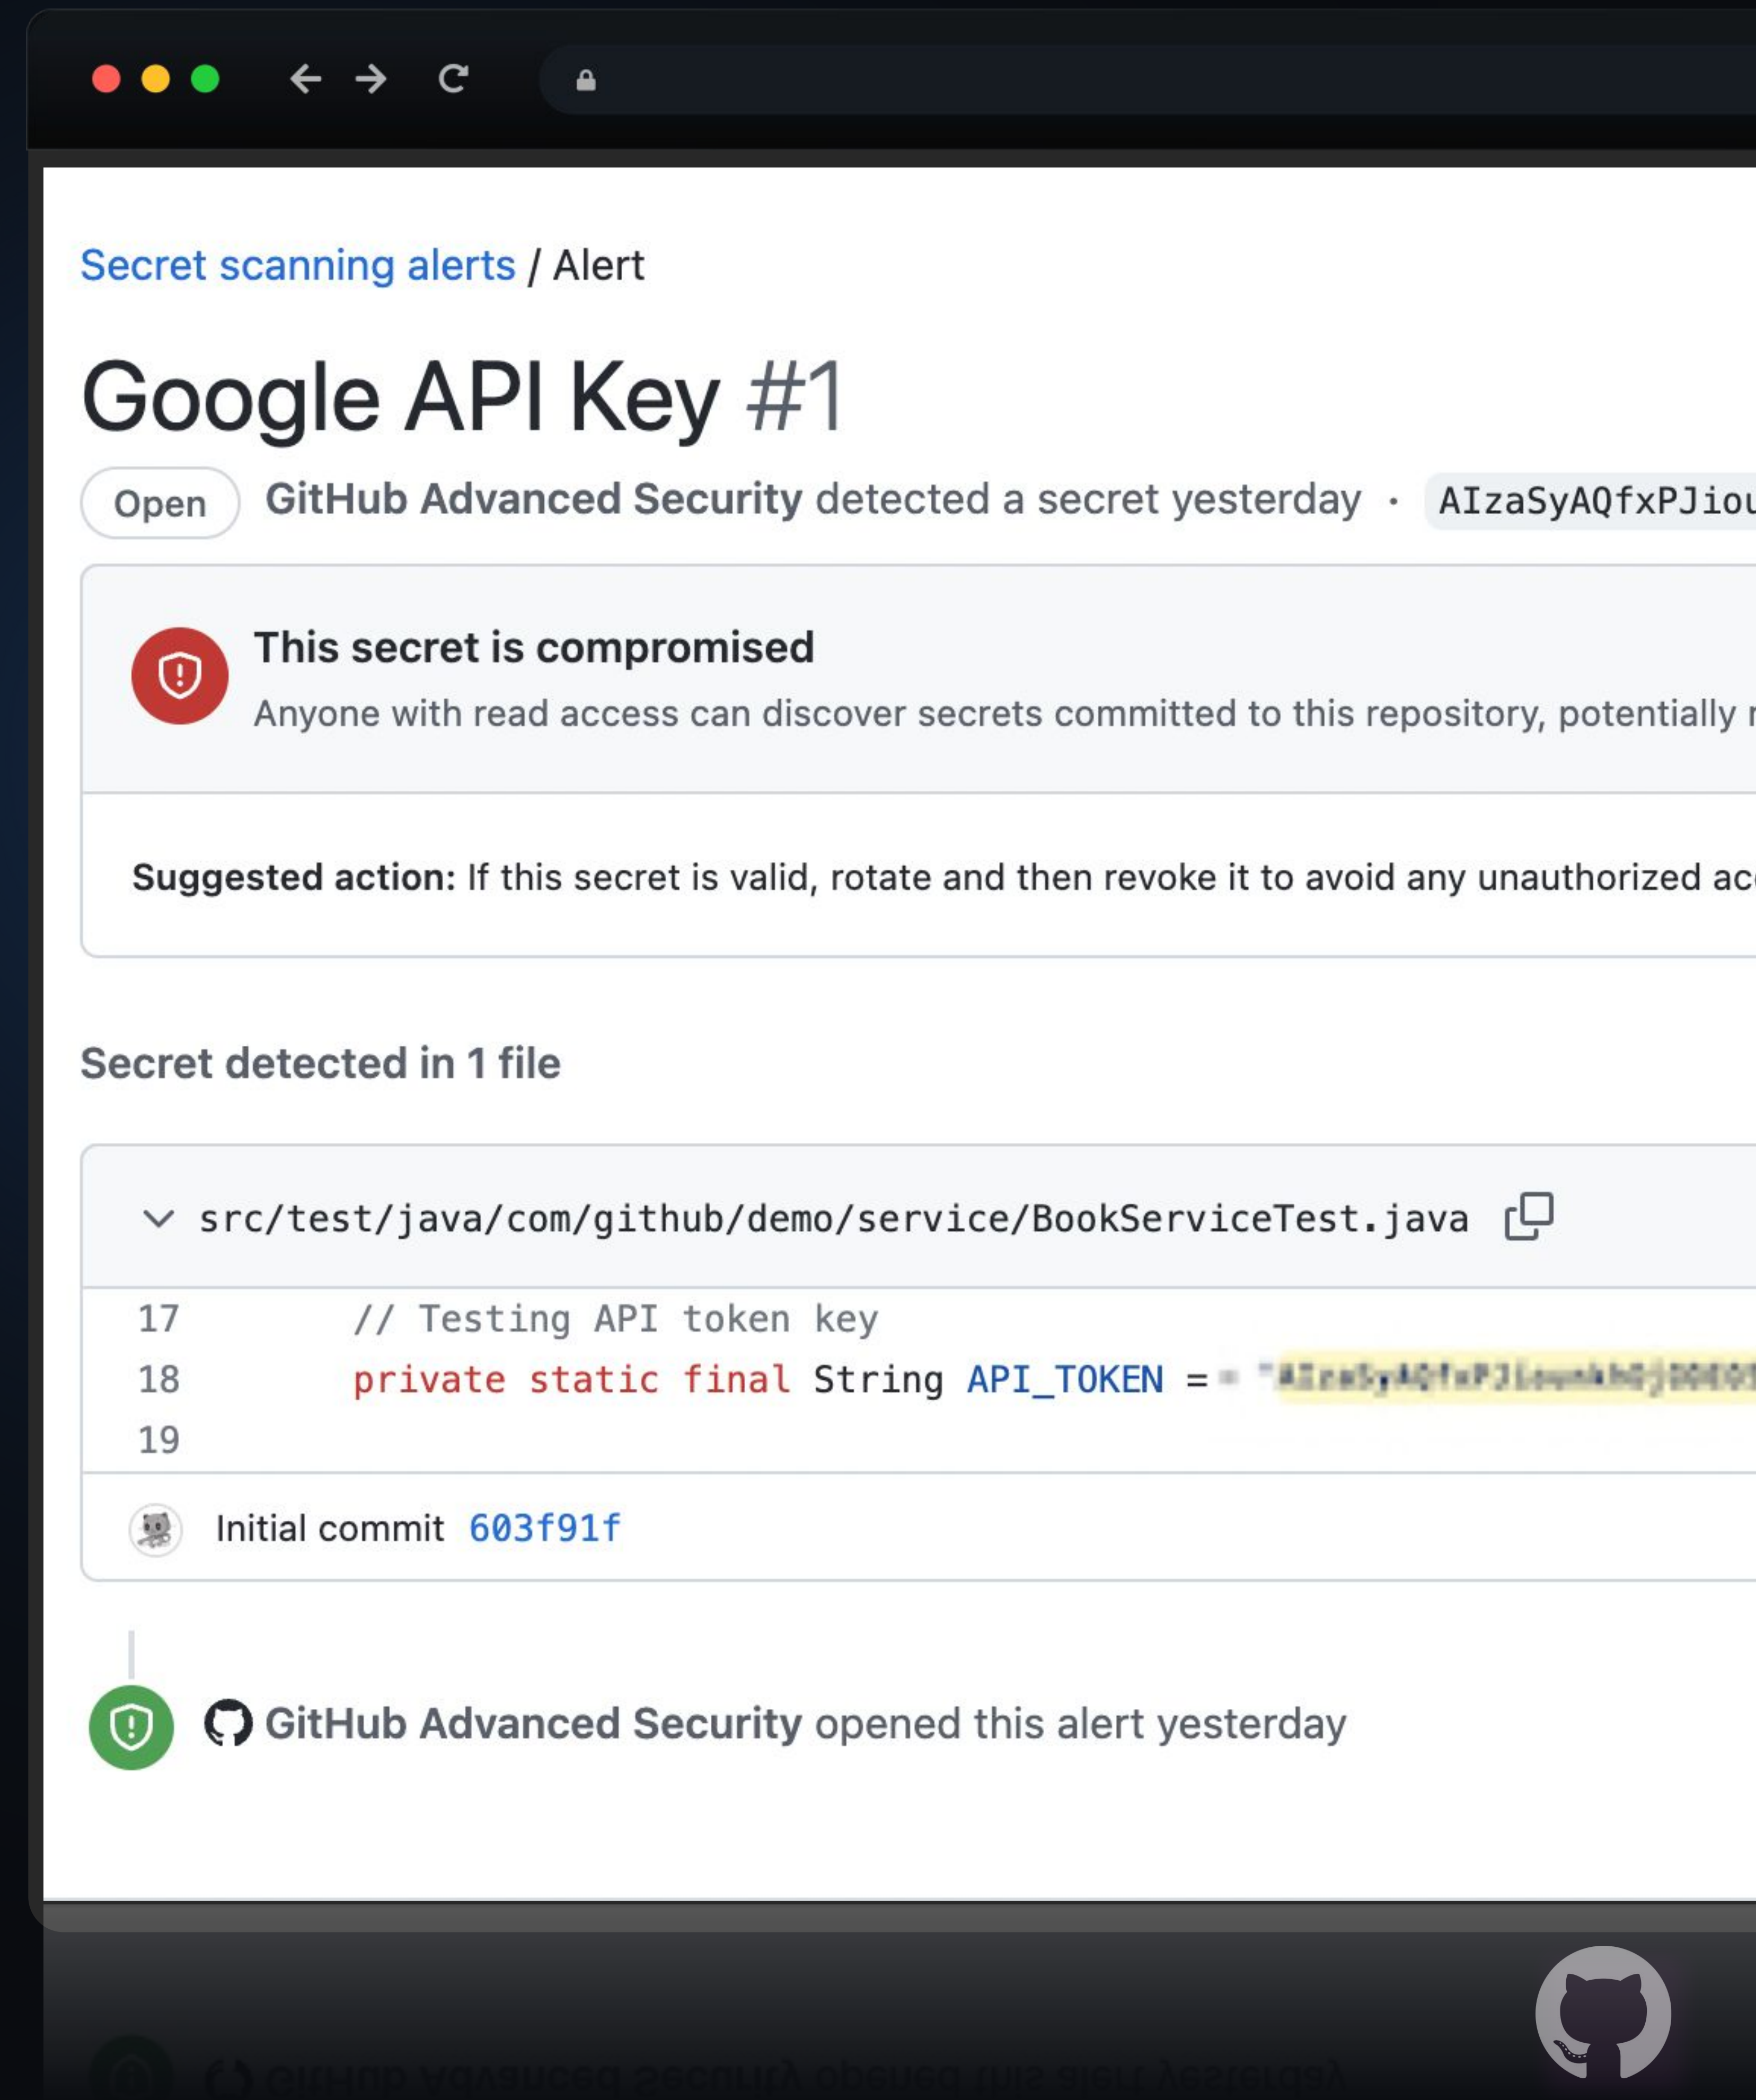

## Define custom patterns

Scan for patterns that are internal to your organization across your repositories.

## Supports both public and private repos

Secret scanning watches both public and private repos for potential secret vulnerabilities.

# Security Overview

GA

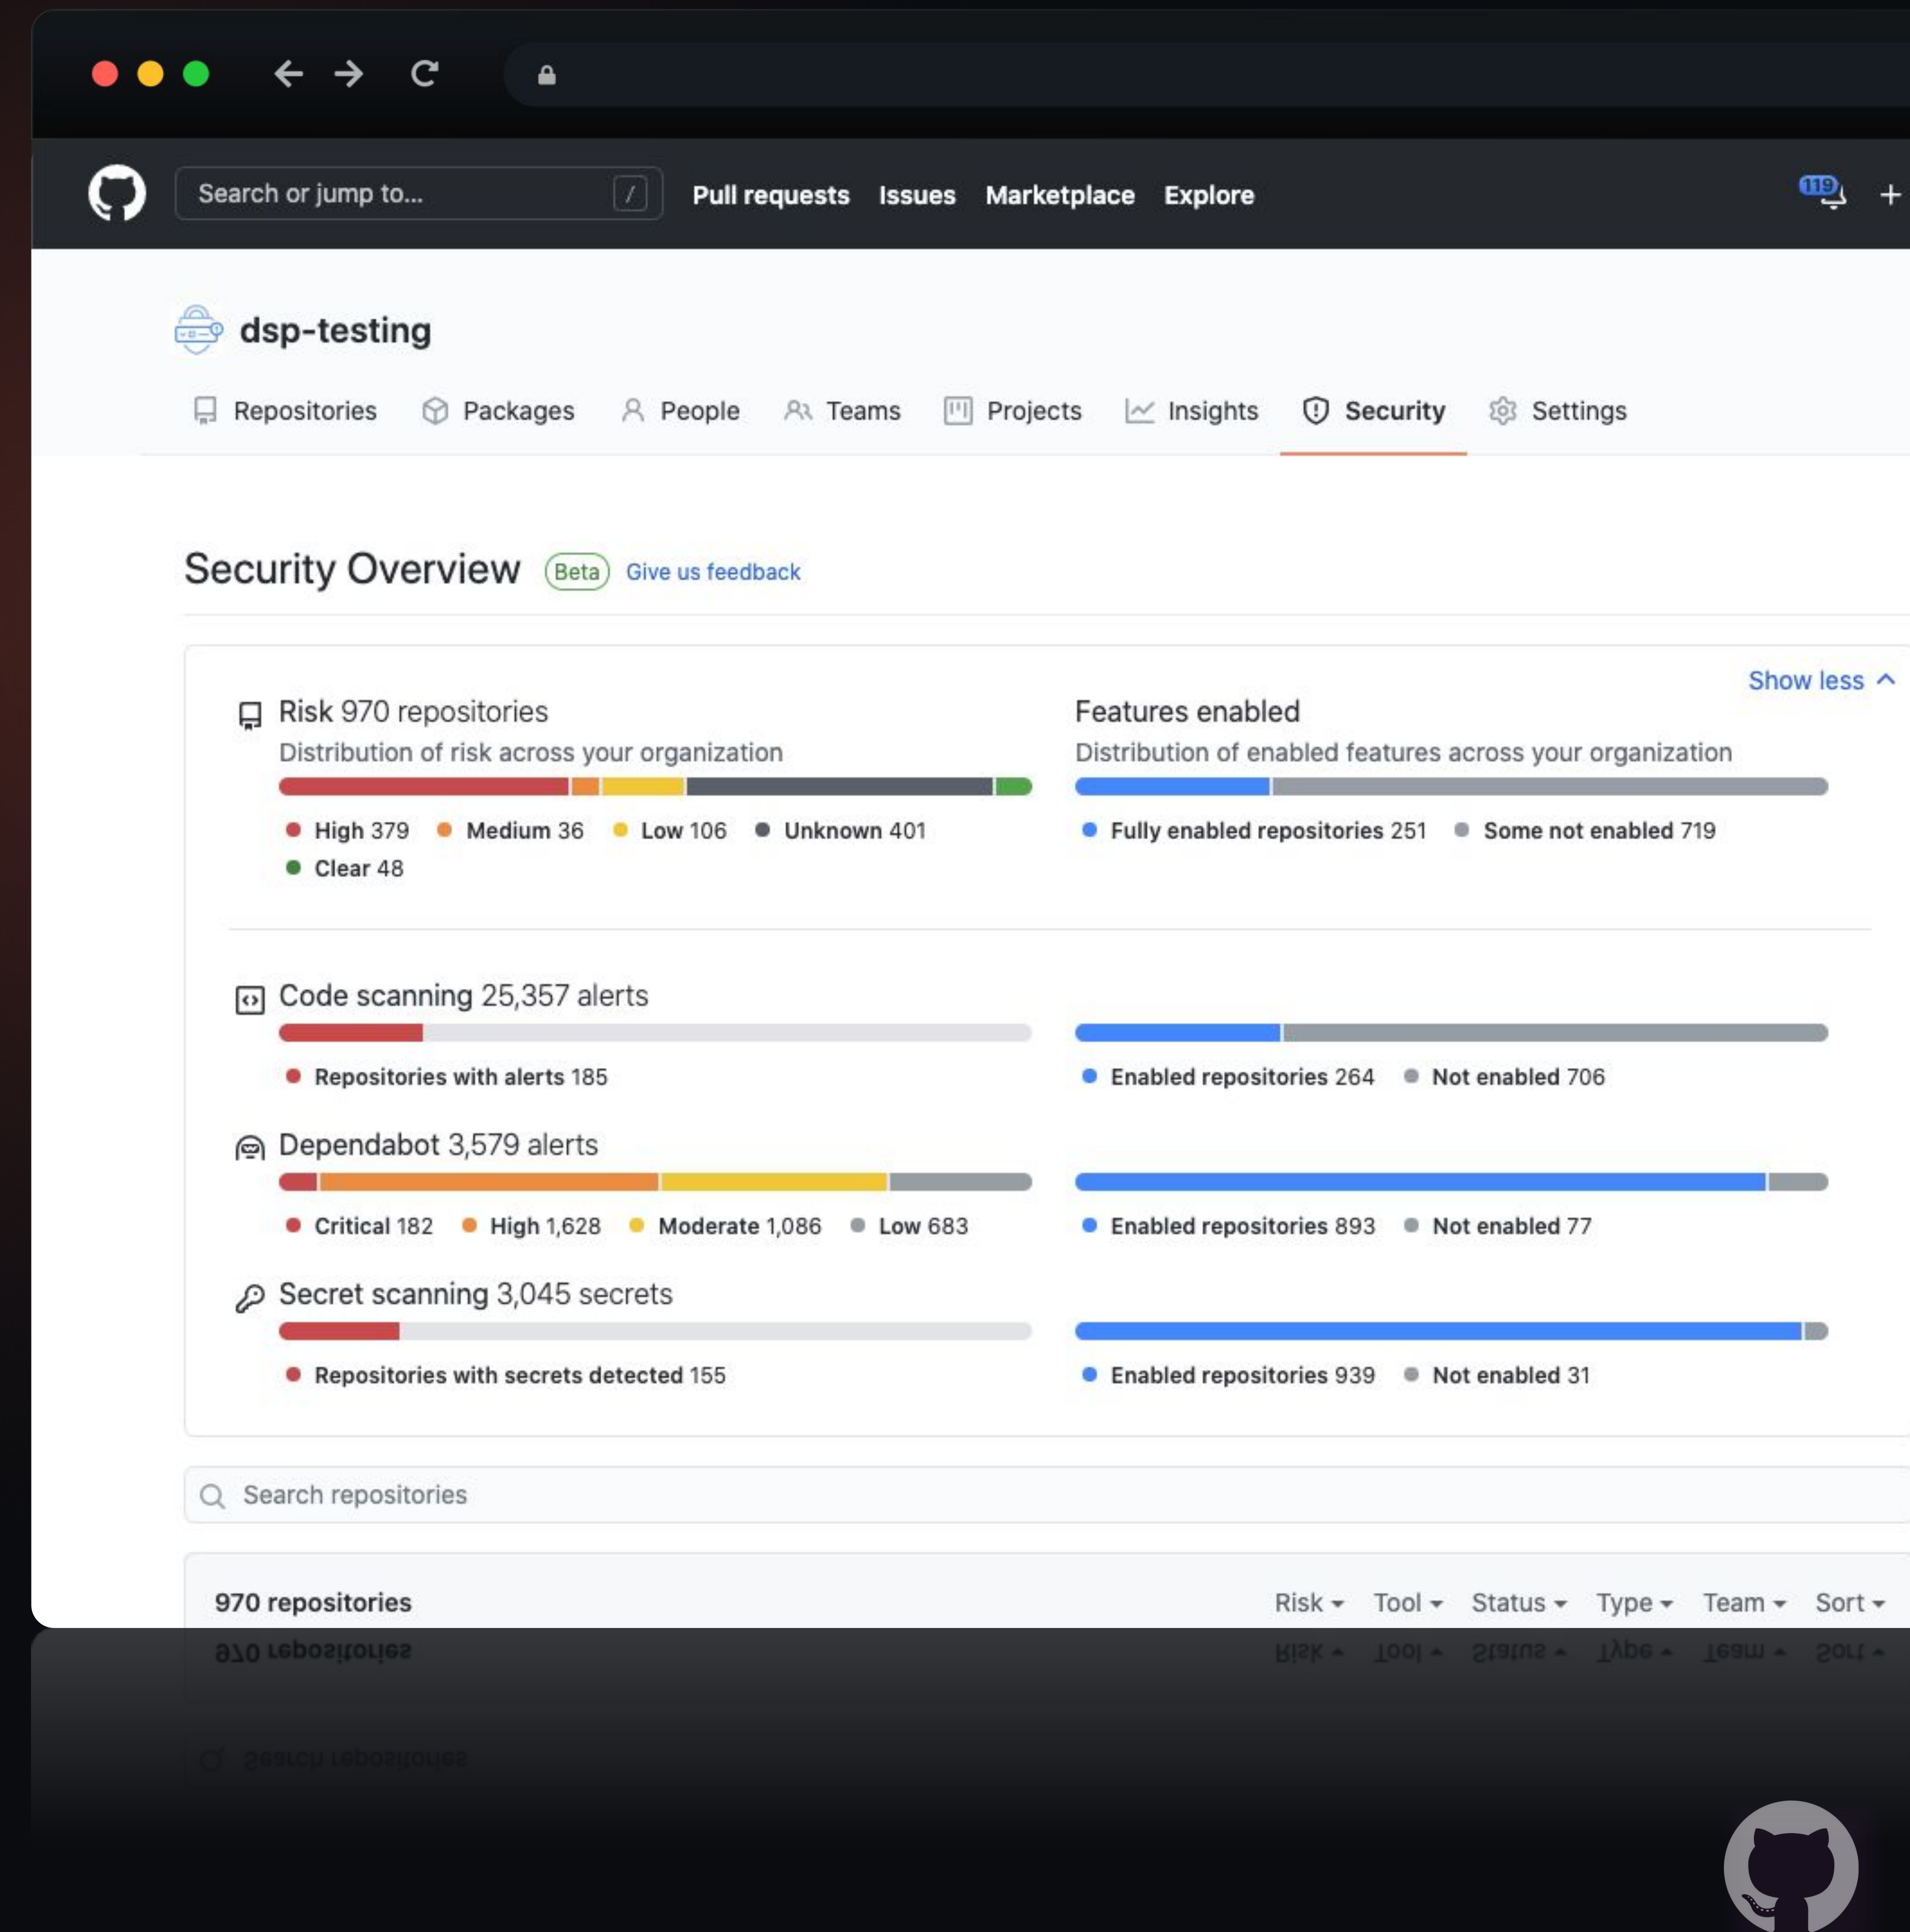

A single place to view code scanning,  
secret scanning and Dependabot alerts  
across your codebases

## Determine the riskiest repos with high numbers of unaddressed alerts

# Monitor enrollment status as you rollout security features across your organization

GitHub Enterprise Platform

# Code search

# Code search

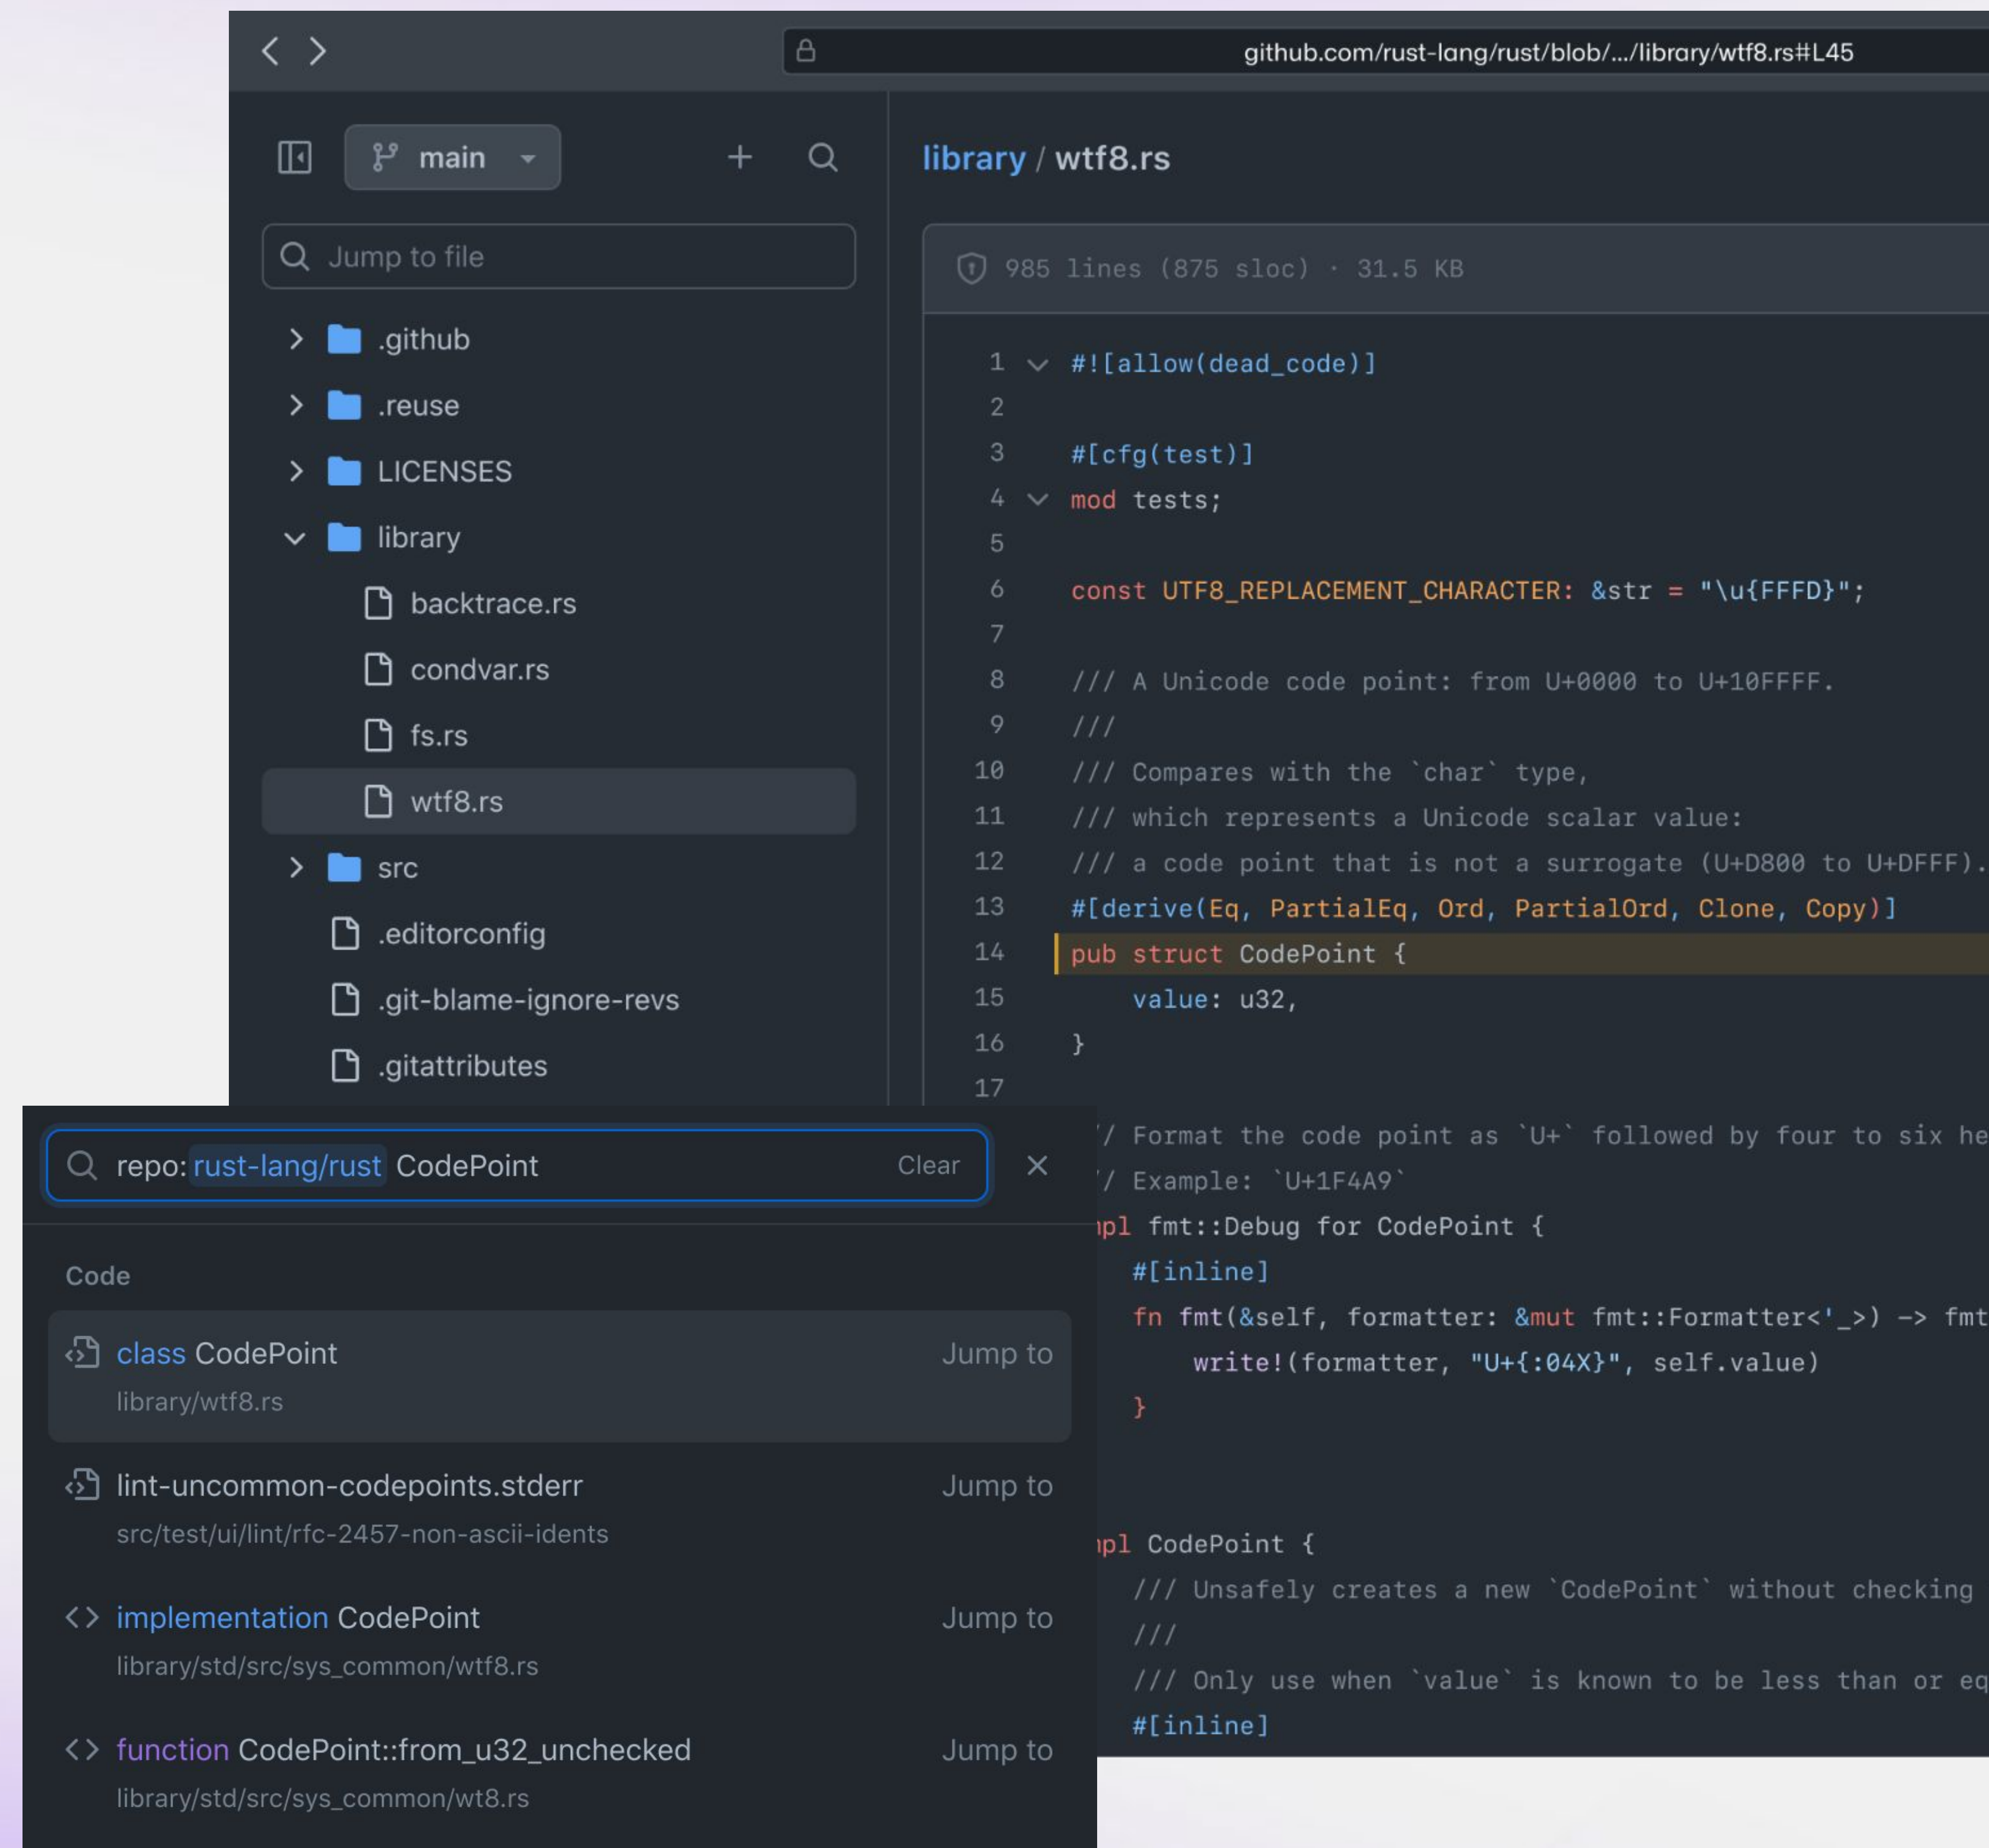

Entirely redesigned search interface, with suggestions, completions and the ability to slice and dice the results

✓ Advanced search syntax

✓ Streamlined UI

✓ File browser

✓ Improved code navigation
